

# **Ultra Low cost and Easy Evanescent-field Fluorescence Excitation Scanner**

GlycoLite will be reborn as a smaller, lighter (10 kg), ultra-high speed (10 seconds or less), and ultra-low cost scanner (list price = to be quoted)

## **GlycoSuperLite GSL2200**

## **GlycoStation:**

It is the world's first comparative glycan profiling system using a lectin microarray that can detect changes in glycan structures due to pathological conditions and cell differentiation etc. with high throughput and high sensitivity. It can be used for a wide range of applications such as new glyco biomarker development and screening, discrimination of stem and differentiated cells, infectivity and glycans on bacteria and virus, immune enhancement and glycans on intestinal bacteria, and biopharmaceutical IgG glycan analysis, etc.
